

In The Claims

- 1) (currently amended) A buccal cavity washer for a buccal cavity, comprising:
an enclosure to allow bi-directional flow of fluid and particles;
a motor to move the fluid and the particles;
an input tank to supply fluid to said motor; and
an output tank to store the fluid and the particles from the buccal cavity ;
- 2) (original) A mechanism to automatically move fluid inside the buccal cavity.
- 3) (previously presented) A process of rinsing and washing the buccal cavity.
- 4) (previously presented) A buccal cavity washer for a buccal cavity as in claim 1 wherein a first pipe connects the input tank and the motor.
- 5) (previously presented) A buccal cavity washer for a buccal cavity as in claim 1 wherein a second pipe connects the output tank and the enclosure.
